The Parts of the Human Design Chart

The Human Design chart, called the Body Graph, is a visual representation of the sum total of human possibilities and energies The entire archetype of humanity is contained within the structural framework of the chart In other words, all of the possibilities for the expression of being human is in the chart

INTERSECTION GEOMETRIC DESIGN

Basic Elements of Intersection Design Human Factors Driver habits, decision ability, driver expectancy, decision/reaction time, paths of angles of 60 degrees provide most of the benefits of right angle intersections (reduced right-of-way and construction costs) to enter or cross it Intersection sight distances that exceed stopping

angle without a curve (See Chapter 1310 for guidance on angle points or short radii curves in the vicinity of intersections at grade) To avoid the appearance of a kink in the road, the desirable length of curve for deflection angles larger than given in Exhibit 1210-1 is at least 500 feet Exhibit 1210-1 Maximum Angle Without Curve Design Speed

including alignment, profile, design vehicles, turning radii, right-turning roadways, left- and right- turn lanes, intersection sight distance, channelized islands, and intersections near railroads

Appendix 2, AC 150/5300-13, "Airport Design" Protecting these surfaces may require locating the runway holding position in a less traditional

location than what is expected by pilots Taxiway Intersections Right-angle vs Angled Taxiways Right-angle taxiways are the recommended standard for all runway/taxiway intersections, except

CHAPTER 9 INTERSECTIONS

• Human factors • Traffic driver has blind areas on the right of the vehicle Acute-angle intersections increase the exposure turning radii and the pavement cross slopes are functions of design speed and type of vehicles Pavement widths for turning roadways are classified as shown in Table 9-1 below

CHAPTER 3

There are three typical types of right-turning roadways at intersections: (1) a minimum edge-of-traveled-way design; (2) a design with a corner triangular island; and (3) a free-flow design using a simple radius or compound radii The turning radii and the pavement cross slopes for free-flow right turns are functions of design speed and
